«WATER ORIGINS»: THE *ALB- ROOT IN THE PRE-LATIN TOPONYMY OF ANCIENT LIGURIA †

Francesco Perono Cacciafoco
University of Pisa, Italy

Summary: Paleo-Ligurian place names of the type Alba, Old European river names Albis and the like, as well as their ablauting forms Olb- (> Orb- in Romance Ligurian) do not reflect directly the Proto-Indo-European (PIE) adjective *albho- ‘white’; rather, they all continue a Pre-PIE extended root *Hal-bh- ‘water’, cognate with Sumerian ḫalbia (> Akkadian ḫalpium ‘spring, well, water mass, water hole’). A further analysis of the same root *Hal-bh- leads to a comparison with the PIE root *H₂al- ‘nourish’. PIE suffixed form *HwaH-r- ‘water’ exhibits a similar diffusion.

To my mother

There are extremely ancient toponymic designations that cannot always be reconstructed from roots directly attested in historical languages belonging to the Indo-European linguistic family. The possibility of the existence of «double roots» should be considered in this context. The factual meanings may have been made up both by contacts and «osmotic movements» (in both directions: to the Indo-European from the non-Indo-European languages and vice versa), and by common genealogical heritage (with all the reservations required by the discussion of the relations of «kinship» within the Indo-European family, of course). Such cases are found especially within groups of words in the field of onomastics and, perhaps in a greater percentage, in the ambit of toponymy (toponomastics).

The question we would like to address here concerns the nomen loci Olbicella. Olbicella is a suburb of Molare (municipality located in the North-Western Italy, Piemonte, now in the Province of Alessandria) [Perono Cacciafoco 2003a: 15], situated along the Orba river, next to the Ortiglieto’s lake. D.Olivieri [1965: 241] wrote about Olbicella: «Olbicella, fr. Molare, Aless. Forse forma in parte dialett. equiv. ad un *Albicella, dal n. pers. germ. ALBIZO?». The derivation proposed by the Italian scholar is part of the traditional practice that enhances, for etymological purposes, the observation – widely seen in the micro-toponomastics – of the use of anthroponyms in order to coin local denominations. But in this case it is – because not accompanied by equally or even more sustainable alternatives – too much apodictic as almost all the toponymic reconstructions that trace back the origin of a nomen loci (of

† I would like, here, to thank sincerely my dear friend and brilliant linguist Prof. Dr. Guido Borghi for the inestimable support that he gave me in the planning of this paper and for the really fruitful discussions on the issues of this work and on the Convergence Theory. I would like, at the same time, to express all my gratitude to Prof. Dr. Maria Giovanna Arcamone for her kindness and for the benevolent trust she has placed in me.

† E-mail: peronocacciafoco@flcl.unipi.it
higher «size» than one individual or gentilitial property) to a proper name of a person of any origin, according to the possibilities offered by the historical and linguistic local stratigraphy, without even an attempt of comparison with names that, being verifiable – or falsifiable – on both «levels» of the «sign» (thus – even within the limits of verifiability of a geographical name – also on the semantic ambit, by definition excluded in the deonomastic formations, where the etymology is not relevant), would set the hypothesis at a higher epistemological level. The dictionary, however, provides an interesting indication about the reconstructed ancient form of the place name Olbicella: *Albicella.

Map 1. Olbicella (coordinates 44°37′11″N 8°36′6″E) and the surrounding area

The root of the etymon of the nomen loci is precisely *alb-. Now we are going to explain why, trying to provide a linguistic contribution to the correct reconstruction of the original meaning of some place names and hydronyms of the Ligurian area (exactly the cultural and linguistic area of the formation of nomina locorum such as Olbicella in the North-West of Italy) and outlining the
existence of a «family» of place names that we would like to call (on the basis of the not only Indo-European root) «water towns».

We have evidence of common elements – albeit remote (already in the Indo-European age) –, in the cultural and linguistic ambit, between the ancient Ligurians (Ligures) and the inhabitants of the Western Europe historically known as the Celts [de Bernardo Stempel 2008]. A macroscopic toponymic isogloss concerns the Britannia (perhaps only in the Southern area, in origin) [Rivet, Smith 1979: 247-248]²: it is believed (and the hypothesis is very convincing) that Albion, the nomen of ancestral origin of Britannia, is connected with the Ligurian toponymic forms Albium and Album [Petracco Sicardi, Caprini 1981: 33]. The toponymic root of the name is common, being *alb- < Indo-European *albh-. From Albium and Album derive – in the ancient and also «contemporary» Ligurian toponymy –, among others, the homologous (homophone and homograph compared to the second lemma) forms Album, Album Inganum, Album Ingaunum ‘Albenga’, Albium (homologous, homophone, and homograph compared to the first lemma), Albintimilium, Album Intimilium ‘Ventimiglia’ [Strabo, Gianattasio 2007: 136] (with this kind of toponymic reconstruction), Albuca (in Gaul and in Aquitaine), Alba, in Italy, Piemonte, now in the Province of Cuneo, Alba Heluorum, in Provence, Alba, now Arjona, in Spain [Rossebastiano 1990: 14]. G.Devoto [1974: 36] also reports, as of possible Ligurian matrix (or influence in the onomastic formation), the place name Albona, an Istrian town located a few kilometers away from the sea. All of these names are attributable directly to the root *alb- and to a simplex form, that is Album. But Album is not primarily linked to the Latin albus ‘white’. It derives instead from the root *albh-, that is the basis, for example, of the Germanic hydronym Albis, the nomen of the Elbe river. All these nomina indicate settlements on waterways, on rivers, lakes, and seas, in practice loci situated near water (and even hydronyms, names of referrals that coincide with the iconym: waterways, watercourses).

What interests us here is that as the root *albh- is the basis of the hydronym Albis, nomen of ancestral origin (as a Paleo-European hydronym) of the Elbe river, so it is the generative component of some ancient and «contemporary» names that denote, like all the other nomina developed by the root *albh-, places located on canals, rivers, or seas. Olbia, the oldest colony of Miletus, on the Black Sea, for example, had, as epichoric nomen, Olbia (without variants), derived from the root *albh- with vocalic ablaut (apophony) of the initial [a-] in the grade of the [o-] timbre (the root *albh- is equivalent, on the lexical level, and it is derived, in the morpho-phonological ambit, from the base *albh-³). Olbia is witnessed, as a place name, in Britain, on the right side of the Bug River (in Ukraine), in Provence [Gianattasio 2007: 159], in Italy (in Sardegna), in Ly-

² In a non-Indo-European perspective, see also G.Semerano [Cavalli-Sforza, Bocchi, Ceruti 2001: 307-317 and, especially, 310].

³ The Greek «reception» Olbia in relation to the antecedent Indo-European *Olbhıyā presents the same characteristics (in the rendering of the vocalism /o/ and of the occlusive /h/) of the «near» Borysthenēs < Indo-European *Bhoru-stenēs ‘murmuring among the spruces’ (personal comment by Prof. Dr. Guido Borghi).
cia, and in Hellespont, that is in very different latitudes. Especially in the case of the Hellenic colonies, of course, there was inevitably a motivational overlap with the auspicious Greek adjective ὀλβιός (ὀλβιός, female ὀλβία, ὀλβία) [Queirazza et al. 1990: 451, Pellegrini 2008: 85].

If we remain within the ambit of *nomina* linked to the root *albh-* and to the meaning ‘water’, it may be interesting to remember that Albula was the ancient name of the Italian river Tevere (Tiber, Latin Tiberis). Albiōn, the nomen of ancestral origin of Britain – from which we started in this reasoning –, denotes therefore the largest island on the English Channel, a locus situated on the water and surrounded by it.

Map 2. The Upper Orba Valley, from the Molare dam to Olbicella

The reconstruction *albh-* (with */bh/ required by the Germanic */b/ in *Albiz ‘Elbe’) is, however, not the only one considered in the doxography. G.Semerano, among the other supporters of the origin of the root *alb-* by a non-Indo-European linguistic «family» (in his theory, this «fact» is postulated by definition, since he denies the existence of the Indo-European), proposes a derivation from the ancient Akkadian ḫalpium (from the Sumerian ḫalbia)
ʻwell, spring, mass of water, water holeʼ [Cavalli-Sforza, Bocchi, Ceruti 2001: 310]. This form, then, would have been transferred to the toponymic system of the Indo-European languages, on the one hand remaining unchanged in the root *alb- (in the Semerano’s perspective with two variants, without [-l-], *ab- and *ap-) and, on the other hand, with the additional homologous basis derived from the vocalic replacement of [a-] with [o-], *olb-, and with the resulting modified lemma, derived from *olb-, *orb-, with [-r-] from [-l-] by rhotacism (linguistic phenomenon peculiar, _inter alia_, in the Ligurian area).

Leaving aside the negation of the Indo-European and the consequent lack of justification for the connection between *alb- and *ab-/ *ap-, the comparison established by Semerano – especially with the Sumerian _ḥalbia_ – imposes a broadening of perspective. A root partly specialized in chromatic meaning and, in any case, an integral part of the toponymic and hydronymic Indo-European system, shows to have even more remote origins. This consideration could explain the formation of _nomina_ – like those listed above – of places located in the closeness of watercourses, water canals, rivers, lakes, or near the sea. Thanks to this linguistic «fact» it is possible to overcome effectively the simplification (sometimes misused by the scholars in the ambit of toponymy and toponomastics) that combines almost all the _nomina locorum_ formed by the *alb- root to the Ligurian-Roman radical (the same definition is ambiguous) _alba_ ‘city, town’, surely applicable in some cases, but not connectable, in the context outlined here, with the place names we have mentioned. The Ligurian bases from which the form _alba_ could be derived, in fact, would be *albo-, *albio-, and *alba-, in the meaning, exactly, of ‘city, town’. Our discussion, however, leads to take a step back. The *hₐalbh- root, originally ‘water’, is used to indicate – applied to a place name – a _locus_, a «locality» situated in the closeness of water. In the Indo-European, then, we are also witnessing a semantic transition. *Hₐalbh-, from ‘water’ and, therefore, in toponomastics, from ‘place located in the closeness of water’, takes, in fact, the extensive and generic meaning of ‘place, city, town’. In the transition from an onomastic system connected to the first anthropization to the later ones, until the proto-urban phase, over the centuries, the semantic characterization related to the concept of ‘water’ has been lost. It comes back, however, in the places located in the adjacency of the watercourses (_loci_ that constitute the numerical preponderance, considered the fact that the proximity of the same _loci_ to the waterways is fundamental to the birth and development of a village or a town), places like Olbicella. Their names are composed by the old and not exclusively Indo-European root *hₐalbh- that has

---

4 *Ab-/ *ap- [Pokorny 1959-1969: I, 51] is a Proto-Indo-European root more ancient than the radical forms leading to _alba_ in the meaning ‘city, town’, and equivalent to the root *alb- that expresses the notion of ‘water’ [Alinei 2000: 539]. In Gallic, for example, the root *ab-/ *ap- (this latter from *akʷ-) means ‘river’. It is witnessed, _inter alia_, in the Gallic form _Abona_ [Lewis, Pedersen 1961: 38], cf. a Bastetanic town called _Abula_ (Southern Spain).

5 See, for example, on the name _Albera Ligure_, Italian place located in Piemonte, now in the Province of Alessandria [Lamboglia 1946: 79-81, Campanile 1981: 71-96, Petracco Sicardi, Caprini 1981: 12, 33].
preserved the original meaning\(^6\).

It should also be pointed out that the nomina locorum derived from the root \(^*albh-\) are part of a series of place names known on the basis of common names of various historical Indo-European languages, both in relation to water, such as \(^*war-\) ‘water, river, rain’, \(^*pal-\) ‘stagnant water, puddle, backwater’, \(^*mar-\) ‘lagoon, sea’, and indicating characteristics or qualities of water or of water currents, such as, for example, \(^*tar-\) ‘strong, penetrating’, \(^*ais-\) ‘fast’, and \(^*albho-\) ‘light, white’ [Villar 1996: 117]. In the common Indo-European, then, in addition to these roots, the radicals \(^*ab-\) and \(^*ap-\) always express, originally, the concept of ‘water’ [Pokorny 1959-1969: I, 23, 51, 79, 80, Devoto 1962: 329, 331, 528, 529, 708, Alinei 1996: 505].

The Latin \(albus\), so, derives from \(^*albho-\), but the origin of this color name descends from a characteristic related to water, to the water «color», precisely. The late Indo-European basis \(^*albho-\) derives, in turn, from the root, not strictly Indo-European, \(^*hₐalbh-\) ‘water’. It, therefore, outlines a semantic transition that leads to the stratification of different meanings for the same root in the passage

\(^6\) On the other hand, for example, the almost sure Paleo-Ligurian origin of the place name \(Alba\) of the town of Alba, located in Italy (Piemonte), is recognized [Petracco Sicardi, Caprini 1981: 33]. The town had the name \(Alba Pompeia\) after 89 BC, probably in honor of the consul Gnaeus Pompeius Strabo. Lamboglia [1946: 79-81] and Petracco Sicardi [Petracco Sicardi, Caprini 1981: 12, 33] attributed to the place name the meaning ‘capital city, administrative centre’ (città capoluogo). This sema is plausible, however, only as a further development of a different onomastic origin linked directly to the pre-Proto-Indo-European root \(^*hₐalbh-\) connected to the meaning of ‘water’ and, specifically, of ‘place situated in close proximity of water’. Alba, in fact, is located for the most part of its extension on the right bank of the Tanaro river and there is no doubt about the atavistic link between the town and this river. Alba was inhabited in remote age, already in the Neolithic, at least from the VI\(^th\) millennium BC, and grew further during the Copper Age – Eneolithic – and the Bronze and Iron Ages [Pessina, Tiné 2008: 47, 56, 99, 119, 130, 132, 143, 148, 231-232, 250-251, Bietti Sestieri 2010: 39, 42-43], and it was precisely in this chronological ambit that the place name «took shape» of a nomen derived from the root \(^*albh-\) and showing a ‘town built near water’, on the Tanaro river in this case. Strabo [www: IV, 6, 2] associated the place name \(Alba\) with the onronym \(Alpes\), pointing out – very loosely and too roughly – that the Ligurian cities were founded often on the heights. In this case (and in many others), however, the assertion of Strabo does not seem to make sense, because Alba is located 172 meters above sea level, in a broad flat valley. It has nothing to do, then, with the heights, while the fact of being located along the Tanaro river reports the undying bond of the city with water. The origin of the onronym \(Alpi\) (that is not the subject of this work and it will be analyzed here, therefore, marginally), Latin \(Alpēs\), singular (especially poetic) \(Alpis\), Greek \(Ἀλβια\), a derivation from a root \(^*alp-\), perhaps a variant of a radical \(^*alb-\) meaning ‘mountain, hill, stone’, is controversial. \(^*Alb-\) indicates ‘water’ and it is difficult to connect this form with the meaning ‘mountain’. It is, however, plausible to derive the onronym \(Alpi\) from another lemma (in all probability wrongly discarded by the most scholars), the Gallic form \(^*alpis\), \(^*alpā\) ‘mountain pasture’, nominal lemma with the Central Celtic suffix \(^*pi\), \(^*pā\) derived from the pre-Proto-Indo-European root \(^*hₐal-\) ‘nourish’ [Pfister 1979: II, 210 ff]. The root \(^*hₐal-\) is connected, in turn, with water and with the fish, that is nourishment.
from the ancient and remote phases of the Indo-European to the late Indo-European: pre-Proto-Indo-European *hₐalbh- ‘water’ and, extensively, ‘place situated near the water’ → Indo-European *[hₐ]albh- ‘white’, originally indicating the light/ clear color of water and, then, ‘white’, considered as a generic color, Latin albus ~ *albhā (late Indo-European form), understood as ‘city, town’, simplified meaning derived from the pre-Proto-Indo-European *hₐalbh- in the and along with the sema ‘place situated near water’. In this regard, it should be noted, as mentioned above, that the original nomen of the Italian Tevere (Tiber, Latin Tiberis) river was Albula and, as a variant of the manuscripts in Dionysius Periegetes, in the related commentary by Eustathius, and in Stephanus Byzantinus, Alba.

The Indo-European, on the other hand, has not drastically and totally lost the meaning of the root *hₐalbh-. On the contrary, it has preserved this meaning in different variants. The Hittite lexeme alpa-s ‘cloud’, whose connection with the Indo-European *albhos ‘white’ (formally possible in the hypothesis of an antecedent *hₐalbho-s) was rejected for semantic reasons (since «alpa- is predominantly associated with rain and thunder» [Kloekhorst 2008: 169]), finds in the iconym ‘water’ an unexceptionable etymology. If, then, we analyze *hₐalbh- as an «extending root» *hₐal-bh-, we can also recognize an equable of this in *hₐal-eu- ‘disorderly wander’ [Borghi 2009: 836-837], a root of hydronymic use that, in the appellativic meaning, passed to indicate the hydromel (mead) and the beer [Pokorny 1959-1969: 33-34].

In addition, according to M.Alinei [1996: 581] (as part of the Paleolithic Continuity Paradigm/ Paleolithic Continuity Theory/ Teoria della Continuità), the root *alb- can be connected to the Proto-Indo-European radical *al-, that is evidenced with the meaning of ‘feed, nourish’ in the Italic area (Latin alō ‘feed, nourish’), in the Celtic ambit (Old Irish alim ‘I nourish’), and in the Germanic areal (Old Icelandic ala ‘feed’). This semantic feature, inherent in the notion of ‘feed, nourish’, is closely linked to the concept of water, because (according to Alinei and in the context of the Paleolithic Continuity Paradigm) this root would be easily connectable with the Germanic name of the eel, German Aal, English eel, Old High German and Old Saxon āl, Old Frisian ēl, Dutch aal, Old Icelandic ēll, Danish and Swedish āl. Apparently devoid of etymology in the traditional reconstruction, in the Paleolithic Continuity Paradigm it is, instead, directly connected to the introduction of fish in the nutrition of the Upper Paleolithic and, therefore, to the aforementioned root *al- in the meaning of ‘feeding, nourishment’, in this case related to the concept of ‘eating fish’, a nourishment evidently derived from the water and plausible, in a so remote age, as a new element of the diet only in places located in close proximity to watercourses or to the sea.

---

7 Personal comment by Prof. Dr. G. Borghi.
Thus, there is a close relationship – that is a sort of formal priority of the one and of semantic necessity of the other – between the radicals *al- and *albh-, up to the point to be variants of a single root referable to the concept of water and, for what concerns the toponomastics, to the toponymic indication of a place situated close to a watercourse or to the sea. The root *alb- regains in this reconstruction two fundamental aspects: the pre-Proto-Indo-European origin (that corroborates the recovery of Semerano’s comparative hypothesis, with the inclusion of the Sumerian) and the ancient direct link with the ancestral concept of ‘water’. The origins of the root seem to be, with valid plausibility, pre-Proto-Indo-European and can be placed in a macro-genealogical linguistic «axis» of a probably Nostratic radical, as regards the antiquity, and coming, therefore, in the final analysis (with an adequate areal coincidence between the theories on the Indo-European pre-history and the iter of the Akkadian according to Semerano), from the Near and the Middle East. The Indo-European, then, has retained the root in its own onomastic system, producing the same
radical in the above listed variants and giving rise, over the centuries, to the transformation of the original meaning of the root that is still reflected, by the way, in many place names, especially – in Italy – in the Ligurian area, as Olbicella (< *Olbiellā).

The *alb- root, moreover, is also expressed – as outlined above – in the *olb- variant from which many of the place names Olbia in the ancient and also in the «contemporary» world derive and from which the nomen loci Olbicella descends. A linguistic phenomenon typical of the Ligurian area can be identified here, namely the transformation of [-l-] into [-r-], here – precisely – in post-vocalic context and before bilabial consonant, and, therefore, the root *olb- is equivalent, in this case, to the Romance (Ligurian) radical *orb-. This consideration leads us to an interesting observation inherent in the nomen of the Orba river that flows (among many other places, before debouching, at the end of its course, in the Bormida river) in the territory of Olbicella and close to the lake of Ortiglieto. The first known attestation of the hydronym dates back to 1137 and the handed down form is Urba [AA. VV. 1899: CXIII, 38, 53], then replicated in 1176 by the wording «[…] super fluvium Urbae […]» [AA. VV. 1899: XXIX, 74, 94]. Concerning the etymological explanation of the hydronym, the proposed derivation from the Latin urbs appears simplistic and meaningless. Already Serra [1931: 126] considered the pre-Latin origin of this nomen and held it close to other equivalent hydonyms of the Ligurian and Gallic territories (Orba, Oge, Orbs). He also had the right intuition (although he did not arrive to the proper deduction, leaving the explanation of the hydronym in the vagueness of the pre-Latin substrate), because the nomen fluminis Orba precisely derives from the root *olb-, apophonic/ ablauting variant of the root *alb- ‘water’, with the transformation – typical, as mentioned, of the Ligurian-Romance linguistic area where the torrent flows – of the [-l-] into [-r-] in *orb-.

So, the root *alb- is the basis not only of the place name Olbicella, but also of the hydronym Orba. Moreover, there is a sort of «point of union» between the place name and the hydronym, represented by another hydronym, Orbicella, an affluent of the Orba river which debouches precisely near Olbicella. The form Orbicella, a variant of Olbicella and the nomen of the affluent of the Orba river, is the linguistic trace of the equivalence of the root *olb- > Romance *orb- in the place name Olbicella and in the hydronym Orba, and is evidence of the rhotacistic phenomenon of transformation of the [-l-] into [-r-] typical of the Ligurian area. Thus, there is a very close relationship, in the ambit of the onomastic affinity (when not of direct equivalence), between the names Olbicella (with preservation of /l/ from the chancery tradition), Orbicella (with receipt of the rhotacism, having been made official later, because of the lesser importance of the referent), and Orba, as well as a close morpho-phonological relationship exists between the pre-Proto-Indo-European radical apophonic variants (dating back to a possible Nostratic origin and ancestrally sourced from Near/ Middle East), then become Indo-European toponymic formations, *hₐlbh- → *hₐolbh- (>*olb-).

The medieval form Urba in the Orba hydronym attests a «change» from the initial [o-] to [u-], that indicates, inter alia, the loss (occurred in much older ages) of the ancestral meaning of the nomen, dating back, plausibly, to a pre-
Proto-Indo-European appellativic source, then transferred in the toponymic use by the local Indo-European. Through a casualness, however, the form Urba, that recalls the Latin urbs ‘city, town’, has the same meaning of the above mentioned Indo-European basis *albhā, derived from the root *alb-, when the sema, by that time, passed to indicate (from ‘place on the water, water town’, *albh-) the simplified and generic notion of ‘city, town’ (> *albā).

The same reasoning has to be developed inherently in the place name of the village of Urbe, that is located (in Italy – Liguria –, now in the Province of Savona) in the valley of the Orba river. The place name coincides (with the variant of the initial [o-] [u-]) with the hydronym Orba and derives from the same root [Queirazza et al. 1990: 676]. The oscillation of the radical form *olb- > *orb-, with the rhotacistic transformation of [-l-] into [-r-], is recognizable even in the nomina of two of the small hamlets that make up the municipality of Urbe (that is, a «scattered» and «composite» village), Martina d’Olba and San Pietro d’Olba (here the graphic [-l-], perhaps conservatively, for official use, perhaps accidentally, in the chancery stratifications, takes precedence over the [-r-], in an alternation already found about the place name Olbicella and the hydronym Orbicella).

We have to note, moreover, that Urbe, as a municipality, is formed, as well as by these two hamlets, also by the small localities of Acquabianca (*albh- ‘water’, *albho- ‘white’ → *albh[o]-albhā ‘light/ clear water, limpid water, white water’, almost a «translation» of the radicals involved in a decisive way in the toponymic and hydronymic development of the nomina of the area under our consideration) and localities of Var a Inferiore and Var a Superiore. The onomastic basis of the two hamlets called Vara is *war- (*wer-/*uer-, *wor-/*uor-), root of the common Indo-European meaning ‘water, river, rain’8 and that is, moreover, the radical of the nomen of the Vara river, the longest watercourse in Liguria, flowing entirely in the territory of the Province of La Spezia. The place name Vara (of Vara Inferiore and Vara Superiore) and the hydronym Vara have remote origin and are part of a «Mediterranean» onomastic system characterized prima facie by the phonetic sequence [-a-] […] [-a-] [Devoto 1974: 28]. Since the diffusion of this specific kind of names in [-a-] […] [-a-] is much more extensive than the Indo-European traditional and conventional areas, the fact seems plausible that these place names and hydronyms date back to an ancient period, and, thus, pre-late-Indo-European (in the case of the root *war- in the form Vara and, in general, in the case of the «Mediterranean» phonetic sequences [-a-] […] [-a-], we are witnessing a regular transformation starting from Indo-European laryngeals in position of syllabic core or adjacent to short vowel: *warā < *h,wah-rahā [Wodtko, Irslinger, Schneider 2008: 356-357] or even, in Celtic, from *Hwoh-rahā [Falileyev 2007: 30]. Among the numerous examples of place names and hydronyms derived from the root *war-, proving the system of double [-a-], we can mention again, in order to be brief, the nomen of

8 The root of the common Indo-European *war- expresses the concept of ‘water’, as well as other equivalent bases, such as *ur-, *wond-, *und-, *ak-, *ap- (not only Indo-European), *ab- (not only Indo-European), *up- [Devoto 1962: 329, 331, 528, 529, 708, Pokorny 1959-1969: I, 23, 51, 79, 80, Villar 1996: 117, Alinei 1996: 505].
the town of Varallo\(^9\) (Italy – Piemonte –, now in the Province of Vercelli), in the Valsesia, situated at the confluence of the Mastellone torrent with the Sesia river, and the name of the Varàita torrent, that debouches into the Po river. The notion of ‘water’ in these cases is always present and, in particular, it is the concept of the ‘river water’ and of the ‘rain water’ that feeds rivers and torrents and that makes possible the life of the villages and of the towns that arise near the watercourses. So the meaning of ‘water’ is repeated throughout all the toponymic series of the loci that contribute to form the municipality of Urbe, as well as in the hydronym Orba and in the place name Olbicella.

[Map 4. The territory of Olbicella]

With reference to the root *alb-* meaning ‘water’ and, within the ambit of toponomastics, at the basis of place names indicating ‘towns/ cities/ hamlets/ sites/ villages located near water’, we could mention numerous nomina locorum derived by the same radical. It might be interesting (but it is not the subject of this study, also due to reasons of «extension») to draw the distinction between the place names designating a ‘site located in close proximity to water’ (in the original meaning of the root, therefore) and the nomina indicating a ‘city/ town’ (in the «new» generic and later sema of the same radical). It will be sufficient to mention only one example, namely Albisola\(^{10}\), a town located in Italy – Liguria –, now in the Province of Savona. It is necessary to distinguish between Albisola Superiore, a place of prehistoric origin founded by the Ligures Docilii, and Albisola Marina, also founded in prehistoric times, but by the Ligures Ingauni\(^{11}\) and independent – already in ancient ages – from the centre of Albisola Superiore. Writing about the same Albisola Superiore, Petracco Sicardi [Queirazza et al. 1990: 17] declares as Roman the origin of the nomen loci, from Alba

---

\(^{9}\) Formed by a second Celtic element *allo-* ‘precipice’ (< Indo-European *pl̥so-, see [Matasović 2009: 120-121]), in reference to the rocky outcrop of the Sacro Monte (personal comment by Prof. Dr. G.Borghi).

\(^{10}\) For a review of the toponymic issues relating to the place name Albisola, see [Perono Cacciafoco 2003b: 22].

\(^{11}\) The territory of the Ligures Ingauni had, as main centre, the town of Albenga, Alburnum Ingaunum, Alba Ingaunum, Albangaum.
Docilia, and alba would be, in this place name, evidence of the aforementioned Ligurian-Roman form alba in the meaning of ‘city, town’. This approach, however, leaves aside the fact that Albisola was founded, as mentioned, by the Ligures Docilii in prehistoric times and that the Romanization of the locus, therefore, could be much later than the creation of the place name. Albisola had in ancient times, by the Ligures Docilii¹², the nomen Alba, but not in the meaning of ‘city’. The sema of that prehistoric Alba was, instead, derived from the pre-Proto-Indo-European root *albh- connected to the notion of ‘water’, and, therefore, the Alba of the Docilii wanted to indicate, originally, a ‘place situated near the water’, in this case near the sea (Ligurian Sea). On the other hand, Petracco Sicardi rightly points out how the Roman name Alba Docilia is mentioned, as the first attestation, only in the Tabula Peutingeriana¹³, a relatively late documentary source that can suggest nothing about the antiquity of the name and, even less, about the original meaning of the same. So, we found a very significant example of the semantic transition ‘water’ > ‘town situated on the water’ > ‘town’ sustained over the centuries by the pre-Proto-Indo-European root *h₁albh-, merged over the centuries in the onomastic system of the Indo-European languages (the Paleo-Ligurian substrate of Latin, in this case). We note parenthetically that Petracco Sicardi derives the Docilia of Alba Docilia from a Roman gentilitial (family name) Dolcilius (that she declares to be probably of Celtic origin), while it seems clearly to be the derivation of the Docilia of Alba Docilia from the nomen of the Docilii, the Ligurian inhabitants – already in prehistoric times – of the original settlement of Albisola. The medieval place name Albuzola (or Albizola) shows how the root *alb- has maintained, over the centuries, its strength, leaving out of consideration the nomen in the «free form» alba and that, despite the loss, in speaking – and writing – subjects, of the notion of the original meaning of the radical *alb- (and, probably, also of the basis alba), it is, de facto, the constituent element of the remote origin of the place name. Petracco Sicardi [Queirazza et al. 1990: 17] adds that the medieval name of the locus, Albizola or Albuzola, is documented in the XIIth century. It seems to be, instead, older. The nomen is attested, for example, in the Charta of foundation and donation of the St. Quentin’s Abbey (Abbazia di San Quintino) in Spigno Monferrato (place located in Italy – Piemonte –, now in the Province of Alessandria), a document dating back to the May 4th of the year 991, in the form Albuzola (and it seems well established, by now, that this nomen designates precisely Albisola) [Bosio 1972: 19, 33, 126-128]. In this toponymic variant the root *alb- shows, thus – even if lost and often misunderstood, in its original meaning, in the perception of the linguistic subjects –, its onomastic strength

¹² The Docilii were a Ligurian tribe allocated, prior to the Roman conquest, in a territory between Albisola (Italy – Liguria –, now in the Province of Savona) and Sassello (Italy – Liguria –, now in the Province of Savona). Their lands bordered those of the Sabazi and of the Statii.

¹³ The Tabula Peutingeriana is a copy dating from the XII-XIIIth century of an ancient Roman map that showed the military roads of the Empire. This document derives the name from the humanist and classicist K.Peutinger who inherited the Tabula from his friend K.Bickel.
and the persistence in the structure of the *nomina* being part of this toponymic and hydronymic «family».

So, another place located on the water and, precisely, on the sea, takes the origin of its name from the prehistory and from the ancient pre-Proto-Indo-European root *hₐalbh- ‘water’.

In the Roman age the Liguria\(^{14}\) presents some well identified linguistic strata: Latin, Gallic (or, at least, an ancient Central Celtic with the complete – and completed – dephonologization of */θ/ < */p/ and labialization of */kʷ/ > */p/), the so-called Lepontic-Ligurian (Southern Celtic characterized by the residual traces of the phoneme */θ/ < */p/ in intervocalic position and by the sporadic persistence of */kʷ/), the Paleo-European Hydronymic («alteuropäisch»), and the Ligustic or paleo-Ligurian. The *nomina* more easily «explainable» are, of course, the Latin names (and the names of Latin origin). But the wish to bring back the onomastics and the toponomastics of the Ligurian area almost exclusively to the Roman age is methodologically incorrect and it is also the cause of obvious mistakes. Many *nomina* are, inherently in the origin, Celtic (Gallic or Lepontic), as *Dunomarus*. Others, instead, do not provide reliable evidence, if we remain within the ambit of the lexicon attested by the historical Indo-European languages. For example, in *Albialis* the *albh-* basis (that is, *hₐalbh-*) presents lexical and derivative peculiarities that do not allow, concretely, a specific attribution to any of the above mentioned first three known strata. In addition, we have to note also the likely pre-Proto-Indo-European origin of the root *albh-*, that is the radical *hₐal-bh-* in the ancestral meaning of ‘water’ (and, extensively, of ‘place located near water’), then – in the common Indo-European – of ‘white’ (understood as the light/ clear color of the water) and in the generic meaning, in *albhā* of ‘city, town’ (in the simplified notion derived from the extensive *sema* of the pre-Proto-Indo-European basis *hₐalbh*).

F. Villar says about the Indo-European setting and on the extra-Indo-European comparability of the Ligurian *nomina locorum* [Villar 1996: 469]: «[…] The Indo-European elements are quite abundant, both in the anthroponymy, and in the toponymy. But we have no right to consider specifically Ligurian all the Indo-European names that do not belong to the other three historical Indo-European strata (Lepontic, Gallic, and Latin). Because nothing assures us that, in addition to those known, there has not been another or others […]». It is precisely in this ambit that the hypothesis about the pre-Proto-Indo-European ori-

\(^{14}\) In Antiquity the Ligurians resided in a territory that included the Côte d’Azur and the Riviera. The land of these populations stretched from the city of Pisa and from the Arno river (Italy, Toscana), to the East, to the Rhone river, to the West. We have also to consider the Ligurian populations of some islands, as Corsica and Elba, mentioned by several authors. In a general way, we talk about Ligurians inherently in the whole coast, also to the West of the Rhone river and until the mouth of the Ebro river. Due to this Western «extension» of these populations, sometimes the name of «Ibero-Ligurians» is used. The Greek colony of Massilia, now Marseilles, moreover, was in the middle of the territory of the *Ligures Saluvī*, one of the Ligurian tribes [Villar 1991: 465, 469, Pallottino 1981].
gin of the root *hₐlbh- in the meanings, in the parallel forms, and in the derivations that we enucleated up to here takes heuristic significance.

Near to conclusion, an onomastic note. Orba is also attested as the personal name of a sovereign in the medieval Ireland. In this case, however, the nomen is not derived (although apparently homologous to that of the Orba river) from the root *albh- (*olbh-), but it descends from the Proto-Indo-European basis *orbho- that means ‘orphan, forsaken, abandoned’ [Pokorny 1959-1969: I, 781, Alinei 1996: 668]. In the Celtic and Germanic areas (and only in these areas) it takes the sema of ‘heir, legacy, heritage’ [Alinei 2000: 566] (Old Irish orbe ‘legacy’, orbam ‘heir’, comarbe ‘co-heir’, Gothic arbja, Old Icelandic arfi and arfr, Old High German arpeo, erbo, Middle High German Erbe ‘heir’, Anglo-Saxon ierfe, Gothic and Old High German arbi) [Hubert 1934: I, 66, Buck 1949]. Therefore, in this case, the regal Irish name Orba means ‘heir, heir of the kingship’ and, then, ‘prince’ and, in consequence, ‘king’, and the Proto-Indo-European and, then, late Indo-European root at the origin of this name is not *albh-, but *orbho-.

It is, therefore, demonstrated that the name of the hamlet of the municipality of Molare Olbicella, the nomen of the village of Urbe (and of two of the localities that contribute to constitute it, Martina d’Olba and San Pietro d’Olba), and the hydronymy of the Orba river and of its affluent Orbicella derive from a common pre-Proto-Indo-European root of remote origin and persist over the time, indicating the notion of ‘water’ and applied, therefore, to the formation of nomina of waterways/ watercourses, or of areas located near the water (streams, torrents, rivers, lakes, and sea). The root that discloses its morphology, in this case, through the equivalent apophonic/ ablauting variant *hₐolbh-, then developed through the passage – typical of the ancient Romance Ligurian area that «contains» the places designated by the analyzed nomina – of [-l-] into [-r-] in the form /orb-/.

So, we have also found the equal persistence over the time of the Proto-Indo-European (of the common Indo-European) root *hₐwahₐ-r-, indicating the notions of ‘water, river’, and ‘rain’, in the names of the loci of Vara Superiore and Vara Inferiore, hamlets of the «composite» village of Urbe, and in numerous other places situated in close proximity to watercourses and in hydronyms.

So, in this analysis, we revealed a panorama of «water towns», all joined by the same toponymic origin derived from the pre-Proto-Indo-European root *hₐalbh- or from the basis *hₐwahₐ-r-, originally indicating the notion of ‘water’.

Therefore it is possible to recognize the existence of a toponymic and hydronymic «family» ¹⁵ that descends from the common pre-Proto-Indo-European root *hₐalbh- (then subjected to the dephonologization of the laryngeal and morpho-phonologically transformed in the variants *albh-, *olbh- [*olb- > /orb-], *albhₐ, *albho- and, in terms of meaning, in the sequences ‘water’ →

¹⁵ On the toponymic and hydronymic European «families» linked to the «water roots» and to the «water notion» (especially in the North-Western Italy) and on the paleo-anthropology of those territories, see [Perono Cacciafoco 2008, 2009, 2011a, b, c, 2012a, b].
ʻplace situated near water’ → ‘place located on the water’ → ‘town’ and ‘water’ → ‘clear/ light water’ → ‘white water’ → ‘white’) and that incorporates in itself the names of the villages of Olbicella and Urbe, the hydronyms of the river Orba and of the torrent Orbicella.
