COMMUNICATION RESEARCH NEEDS AND PRIORITIES IN ASIA

SCHOOL OF HUMANITIES
UNIVERSITI SAINS MALAYSIA
PULAU PINANG
22 — 24 September 1983

All Seminars will take place at the Humanities Conference Room, Building 301.
Introduction

Communications in the last quarter century has witnessed vast and rapid developments including the application of far-reaching technologies. No country in the world is today left untouched by the impact of these changes often described as "the Communications Revolution". At the international level, discussions on communication have reached a high level of controversy and contention. How these enfolding issues affect and interact with concerns and policies at the national levels is what puzzles leaders and decision makers. Two main sets of issues which this seminar has chosen to focus on are:

(a) the role of research in elucidating, fact-finding, and providing guidance on the effects, impact and future directions of this revolution. There is a need to identify and set priorities for research issues, topics and proposals. Concrete proposals which allow for comparative perspectives developed from studies of situations in developing countries, should be drawn up and undertaken.

(b) the shape and design of communication education for present as well as future needs.

Objectives

1. to identify and set priorities for a research agenda on communications for Asian countries.

2. to propose, develop and promote, structures and mechanisms for cooperation in research as well as for the dissemination and sharing of research results among communication scholars, administrators, and practitioners.

3. to discuss and study the implications of the new communication developments especially on the design of communication education and training programs so that they may flexibly crest developments of the future.
